Labor Force Growth  
Dionny McDonnell, Economist

Note: 2019:52  
May 15, 2019

## Nevada Labor Force Growth at 2.8% Over-the-Year; Outperforms National Labor Force Growth at 1.0%

<b>Nevada Labor Force</b> (Year ending April 2019 average growth)				
	labor force	employment	unemployment	unemployment rate
Year ending April 2018	1,471,720	1,399,760	71,960	4.9%
Year ending April 2019	1,512,610	1,447,690	64,920	4.3%
Change	40,890	47,930	-7,040	-0.6%

1

- Information from the Local Area Unemployment Statistics (LAUS) Program, produced by state agencies in cooperation with the Bureau of Labor Statistics (BLS), allows us to evaluate growth/decline in Nevada's labor force, employment, unemployment and the unemployment rate (unemployment-labor force ratio). Figures in this research note are not seasonally adjusted.
- The LAUS program uses models to calculate employment and unemployment estimates. The employment model combines historical employment estimates, current employment figures from the Current Employment Statistics (CES) and agricultural employment and all other employment<sup>2</sup> from the Current Population Survey (CPS). The unemployment model combines historical unemployment estimates, current unemployment data from CPS, Nevada's unemployment insurance claims numbers, and new entrants and re-entrants to the labor force figures from CPS.
- Over-the-year, employment increased by 47,930 or 3.4 % in the Silver State. During this period, CPS employment and CES employment increased. The number of unemployed fell 7,040 or 9.8% in 2019 relative to 2018. The CPS unemployment, the continued claims and the new entrants to the labor force declined over the year.
- Estimates show that Nevada's labor force has averaged 1.51 million in year ending April 2019, up from 1.47 million in year ending April 2018. This translates into an increase of 40,890 more Nevadans in the labor force, either working or actively seeking for work. Nevada's labor force has increased 2.8 percent over-the-year. That compares to one percent increase nationwide.

<sup>1</sup> Numbers might not add due to rounding.

<sup>2</sup> All other employment includes self-employed persons who work in their own unincorporated business, unpaid family members who work for a business owned by a family member, and private household workers.

# Research Notes

- These trends have resulted in a decline of 0.6 percentage points in the unemployment rate. Through the year ending in April 2018, the unemployment rate averaged 4.9 percent. With a solid employment growth and a reduction in unemployment, it has declined to 4.3 percent through the year ending April 2019.
- As of April 2019, Nevada's population 16 years old and older stands at over 2.4 million, this is up from over 2.3 million in 2018 an increase of 2.4%. This increase in working population is supporting the economic growth in the state. The population and economic growth are contributing to the expansion in the labor force.
